

IN THE SPECIFICATION

Please amend page 15, line 21 through page 16, line 10 as follows:

When the shape of the moving picture to be played-back changes every frame, the shape change of the moving picture is reflected in a moving picture display by changing the shape of the second window E32. When the color information of the moving picture to be displayed changes, the third window E33 is again drawn according to the color information. As a result, the change of the color information is reflected in the moving picture display. In the present embodiment, the first window E31 displays in superimposition the moving pictures to be played back every frame. The shape of each frame of the moving picture is set on the ~~first~~ second window E32 corresponding to the child window of the first window E31. The shape of the second window E32 is set on the third window E33 corresponding to the child window of the ~~first~~ second window E32. In this way the picture of each frame is drawn.
